

Water poem

Water has three states,
liquid becomes gas when it evaporates,
solid becomes liquid when it melts
and gas to liquid when it condensates.
We can find ice in icebergs,
and liquid water in rivers.
The formula of water is H₂O,
it has 2 atoms of hydrogen
and the O means oxygen.
Ice floats,
but the other substances do not.

Uxía

The water is so transparent that one can hardly see.
Water is healthy when it is practiced sport.
Water is necessary to live.
Water is dew when it is very cold.
Living beings need water to survive.
When it is hot the water evaporates because of the sun.
Some animals don't need to drink water every day.

Sandra Pinto

WATER

Long time ago in a small town there was a boy that used a lot of water in baths. One day the water finished in the town and the people decided to throw out and the boy from the town till he recovered some water.
So the boy traveled to the mountains to try to find water. He was looking for water. The boy found water in a cave so the boy put water in buckets.
The boy, very happy, returned to the town. All the people was very happy with the boy.

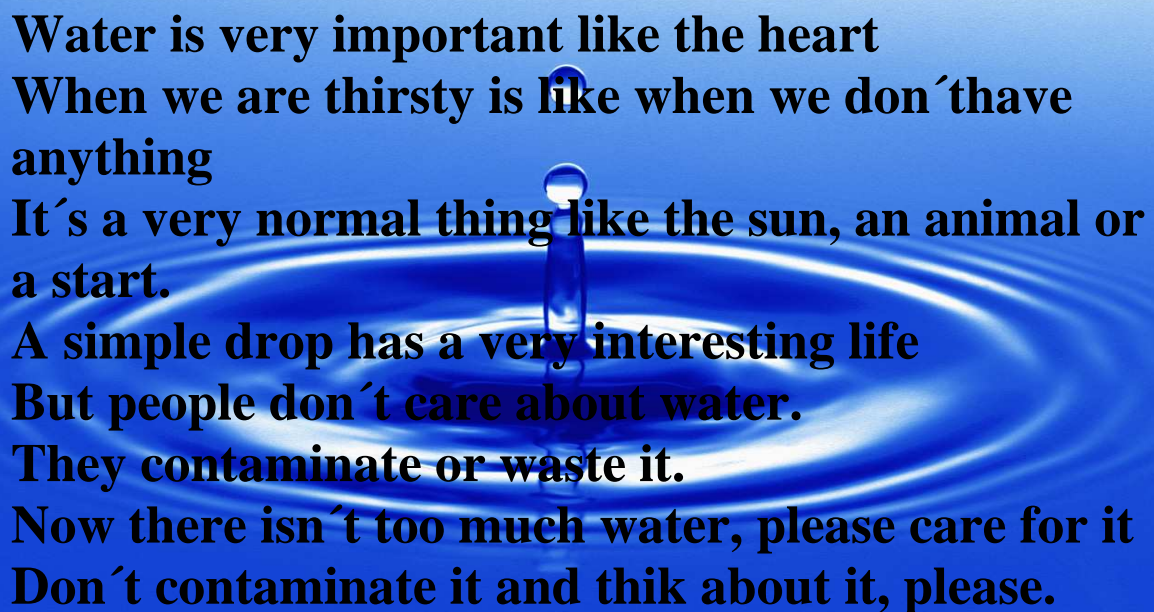

Adrián Sánchez

The long journey

On Everest, there were many frozen. In summer they melted and a drop called Bloofy went to a reservoir and all her friends went to the sea, crossing the rivers. She was alone. In the reservoir Bloofy made new friends and they had a big party with balloons and food, (molecules of hydrogen and oxygen). Her friends had been living there since they were born and had never moved to another place. But one day in summer humans opened the doors of the reservoir. Bloofy and her friends went through the rivers into the sea. It was the nicest place on Earth for them! There were a lot of fish and seaweed. The next day, Bloofy met her old friends from the mountain. Now they were in the Indian Ocean! It was a paradise.

WATER

**Water is very important like the heart
When we are thirsty is like when we don't have
anything
It's a very normal thing like the sun, an animal or
a start.
A simple drop has a very interesting life
But people don't care about water.
They contaminate or waste it.
Now there isn't too much water, please care for it
Don't contaminate it and think about it, please.**

María

The Water

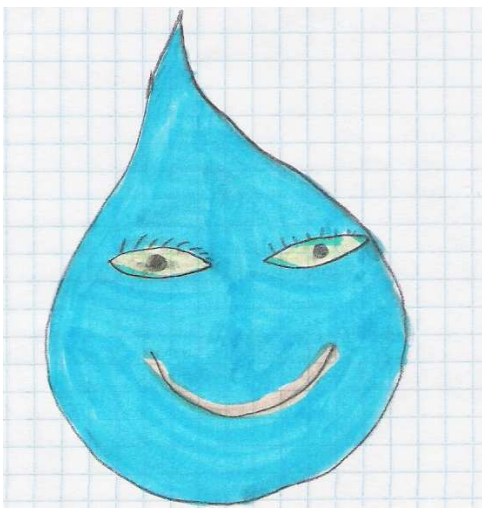

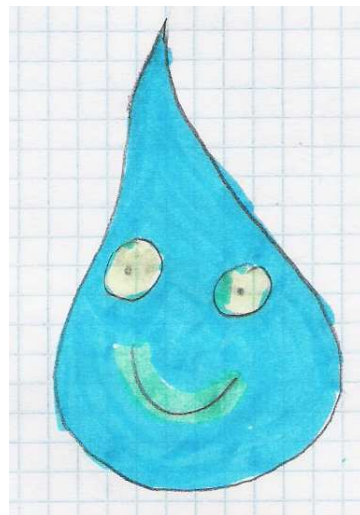

Water is a liquid,
water is transparent,
but I drink water,
It pass my heart
and I think of you

by Ainhoa Galindo

The water

One year a drop fell off a cloud and it fell in a river and it went to the river with other drops. The drop found a friend, the drop was very happy. But the friend evaporated from the river it went to the cloud. The drop went to the sea.

The drop played with the fish and the crabs. The drop evaporated because the sun heated the water and the drop went to the air and formed a cloud when many drops condensed. One day it rained. The drop fell tree and it went to the underground, went to the sea, and evaporated again.

Oscar

Water is a liquid,
It is necessary for people
because we are 75% water.
What other things do we use water for?
Wet plants, clean the car, shower us
Without water, all living things would die.
If water were ice,
Nothing would exist,
We would be neither here
Thank you, water.

Roberto

Water

Tap water is the best
I like it very much
it has all the substances.
Sea water is the best
I like it for the fish
it has salt.
River water is the best
I like it very much for frogs
it is pure and it has minerals
Bottle water is the best
I like it for humans
It has a very good proportion of salts.

Para Adela, con cariño. Rodrigo

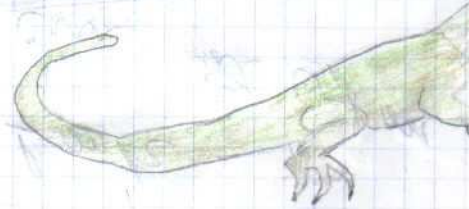

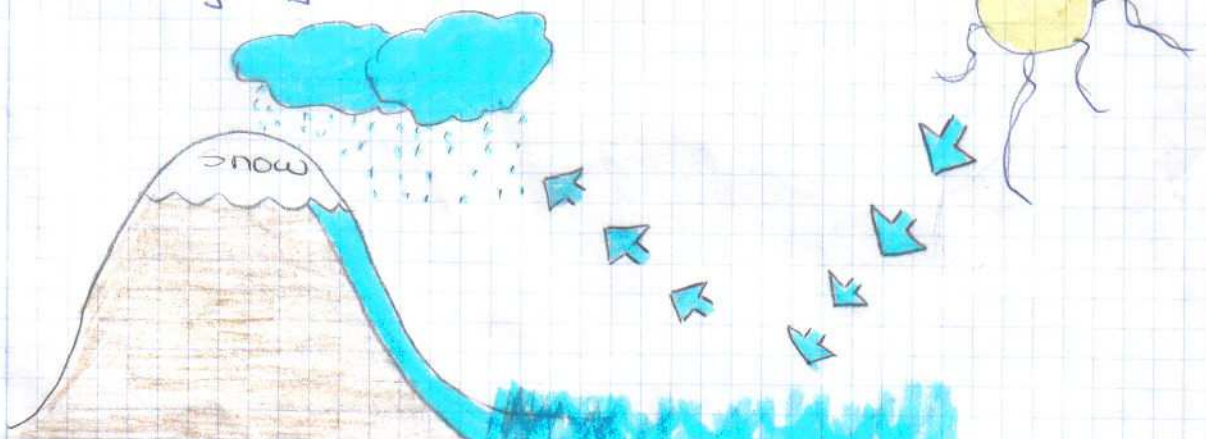

Water

Water comes from the clouds
Water is beautiful
It is very important to us
It sometimes is contaminated
Water is cold and warm
Snow it solid liquid
When it rains we have more water
Water is essential

the Water

- * The water is so transparent that one can hardly see
- * Water is healthy when it is practiced sport
- * Water is necessary to live.
- * Water is dew when it is very cold.
- * Living beings need water to survive.
- * When it is hot the water evaporates because of the sun.
- * Some animals don't need to drink water every day.

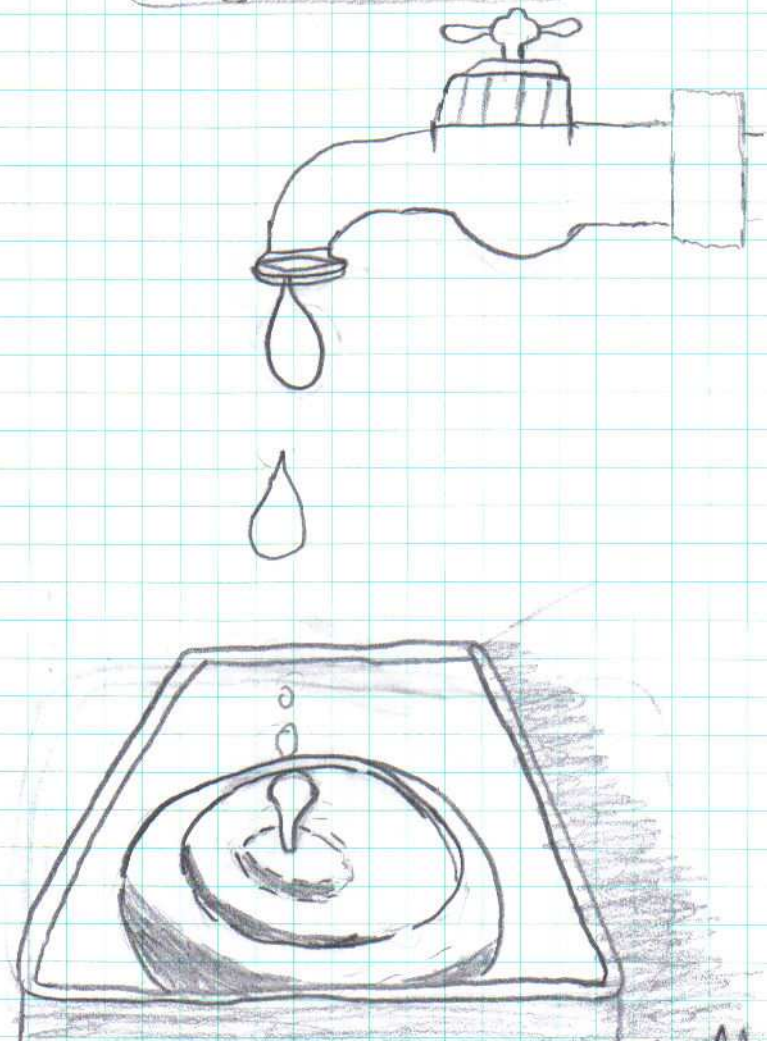

Poem of water

An important liquid for life

Water, is an important liquid for life
if you don't drink it, you will die.

If you think that Coca-cola is better,
don't think this because it isn't true,
water is better for you.

Animals and plants need water to survive
and you do too (if you want to live,

A little drop of water

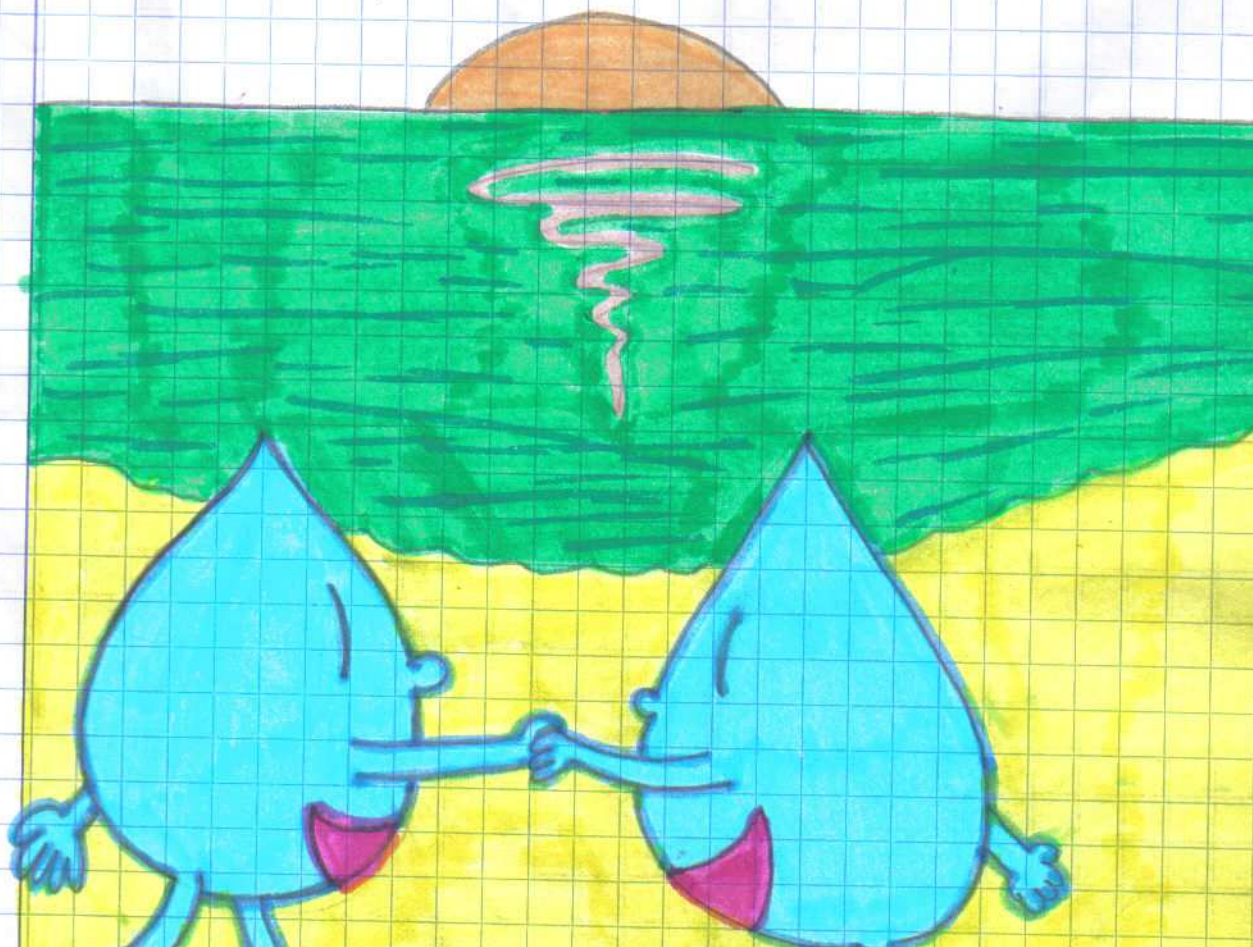

There is a drop of water
that is fat
and has a lot of salt.

It doesn't have family
but it is so happy.

I don't know why it is in here.

And a little drop appeared.

It and the other drop went to the

WATER POEM

Water has three states,

liquid becomes gas when it evaporates,

solid becomes liquid when it melts

and gas to liquid when it condensates.

We can find ice in icebergs,

and liquid water in rivers.

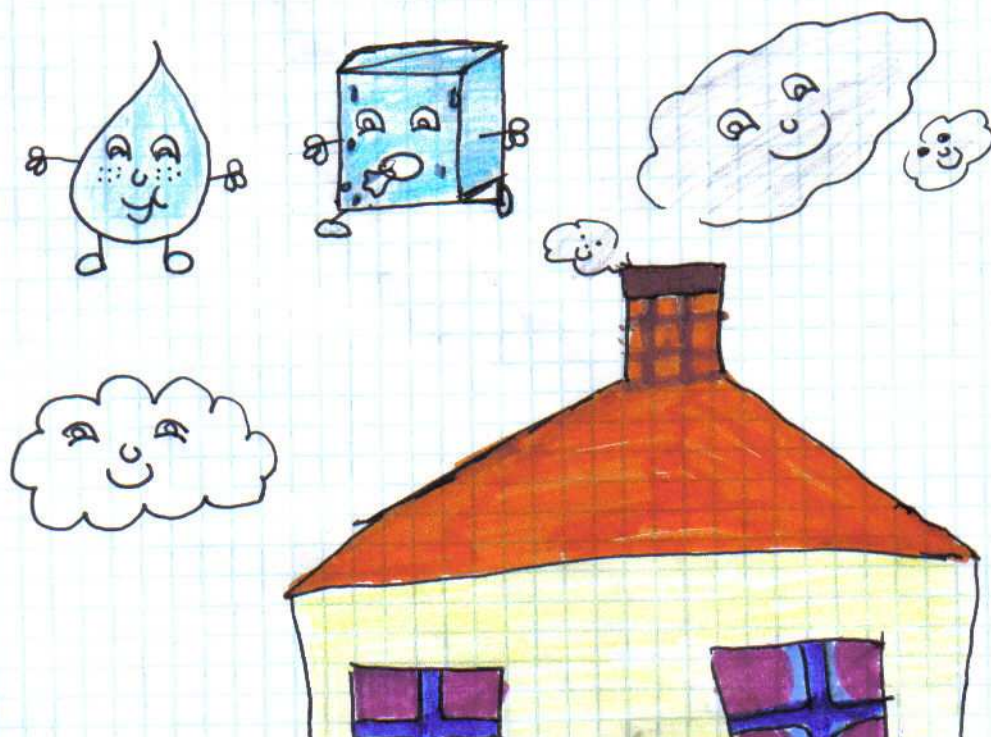

The formula for water is H_2O ,

it has 2 atoms of hydrogen

and the O means oxygen.

Ice floats,

but the other substances do not.

Proof of water

The water that I drink is insignificant for some people and so valuable for others. It seems obvious, something so simple, but so full of vitality and energy.

The water that I drink that does not contain chlorine, in the world would respect it and if this time to think of those that don't have it because it is **INDISPENSIBLE** for human beings. Together, we can maintain the water like we all believe.

Water

Water is necessary for us.

Water is healthy.

Water is colorless.

Water is odorless,

And it is a tasteless liquid.

Water is the best because we need it to survive.

Water is a part of my life.
